Instructions after soft tissue surgery

Soft tissue augmentation and grafting procedures are the most delicate oral surgical procedures. Grafts cannot be disturbed while healing as they need to be immobilized to get blood, oxygen, and nutrients. Moving the lips, whether by pulling them away with the fingers or by exaggerated facial expressions, will result in graft failure. It is of utmost importance to leave the graft alone undisturbed. It does not matter if you only do it once, **all it takes is once for the thin blood vessels to get severed or the sutures to get loose. WE CANNOT EMPHASIZE THIS ENOUGH.**

These following instructions are designed for your comfort and protection.

1. Be present 15 minutes before your scheduled surgery time.
2. Take any prescribed medications as indicated by your physician.
3. If no sedation is being administered, you will be OK to drive yourself home. If you feel anxious about your appointment, it is beneficial to have a friend or family member come with you to your appointment.
4. Use a cold pack on your face next to the surgical area to help keep the swelling down. Wet wash cloths frozen in a Ziploc bag are adequate. Keep the cold packs on for 10 minutes, and off for 10 minutes. Repeat this sequence for a few hours. Cold packs are only beneficial for the first 48 hours after procedure, after that warm pads are preferred starting day 3.
5. You will have some discomfort in the area of the surgery. Please take any prescribed medications by your doctor as indicated. If you were given an antibiotic, steroids, or nasal decongestant, please take this entire prescription until it is gone. If, however, you develop a reaction to the antibiotic, please Contact Dr. Sweidan immediately.
6. Do not attempt to brush or floss the area of the surgery for two weeks. It is OK to brush and floss other areas of the mouth, including your tongue, but avoid the surgical area. It is necessary to rinse two to three times throughout the day with warm salt water (starting the following day). Avoid over the counter mouth-rinse. Only use warm salt water, or any prescription mouth rinse Dr. Sweidan may prescribe. A ratio of half a teaspoon in half a cup of warm water is adequate.
7. Avoid smoking and alcoholic beverages for the first week as both interfere with healing and can cause additional postoperative problems.

8. Please limit your physical activities following surgery. Do not do anything strenuous for the first 2 to 3 days post-operative. You can begin to exercise lightly after the 3rd day. Try to take it easy and get plenty of rest on these days.
9. If you have sutures in place, and you feel that one is loose, do not attempt to remove these on your own. If the suture is too long and bothersome. **DO NOT ATTEMPT TO REMOVE THE SUTURES.**
10. It is common to have some slight oozing of blood mixed in your saliva for 24-48 hours following surgery. If you do see excessive bleeding or heavier amounts of bright red blood, please call the office.
11. Drink plenty of cool fluids in the first few days, such as water or fruit juice, but avoid sucking through a straw for the first 24-48 hours.
12. Try to eat softer foods for the first **two** weeks, and try to eat away from the surgical site. **Do not bite into anything**, food should be broken and eaten in pieces. Avoid spicier foods, and tougher foods that require a lot of chewing. If you feel that you are not getting enough nutrients, it is helpful to supplement your diet with a nutritional drink such as Ensure. As a rule of thumb, anything you can cut with a fork is considered soft. **Do not eat crunchy foods including chips**, nuts, romaine lettuce, popcorn, fried foods, pretzels, apples etc.. Pastas, grilled fish, shredded chicken are good and offer good nutritional value.
13. If you feel like anything is out of the ordinary, or have any questions, please call the office or

Dr. Sweidan at his cellphone after hours, we are here to help.

If you have difficulty breathing call 911 immediately!

Dr. Sweidan's cell phone number is (985) 273-9737.
