Crust Shadow

Crust Shadow is a "Kusama version" for Crust Network, an early unaudited release of the code that is available first and holds real economic value.

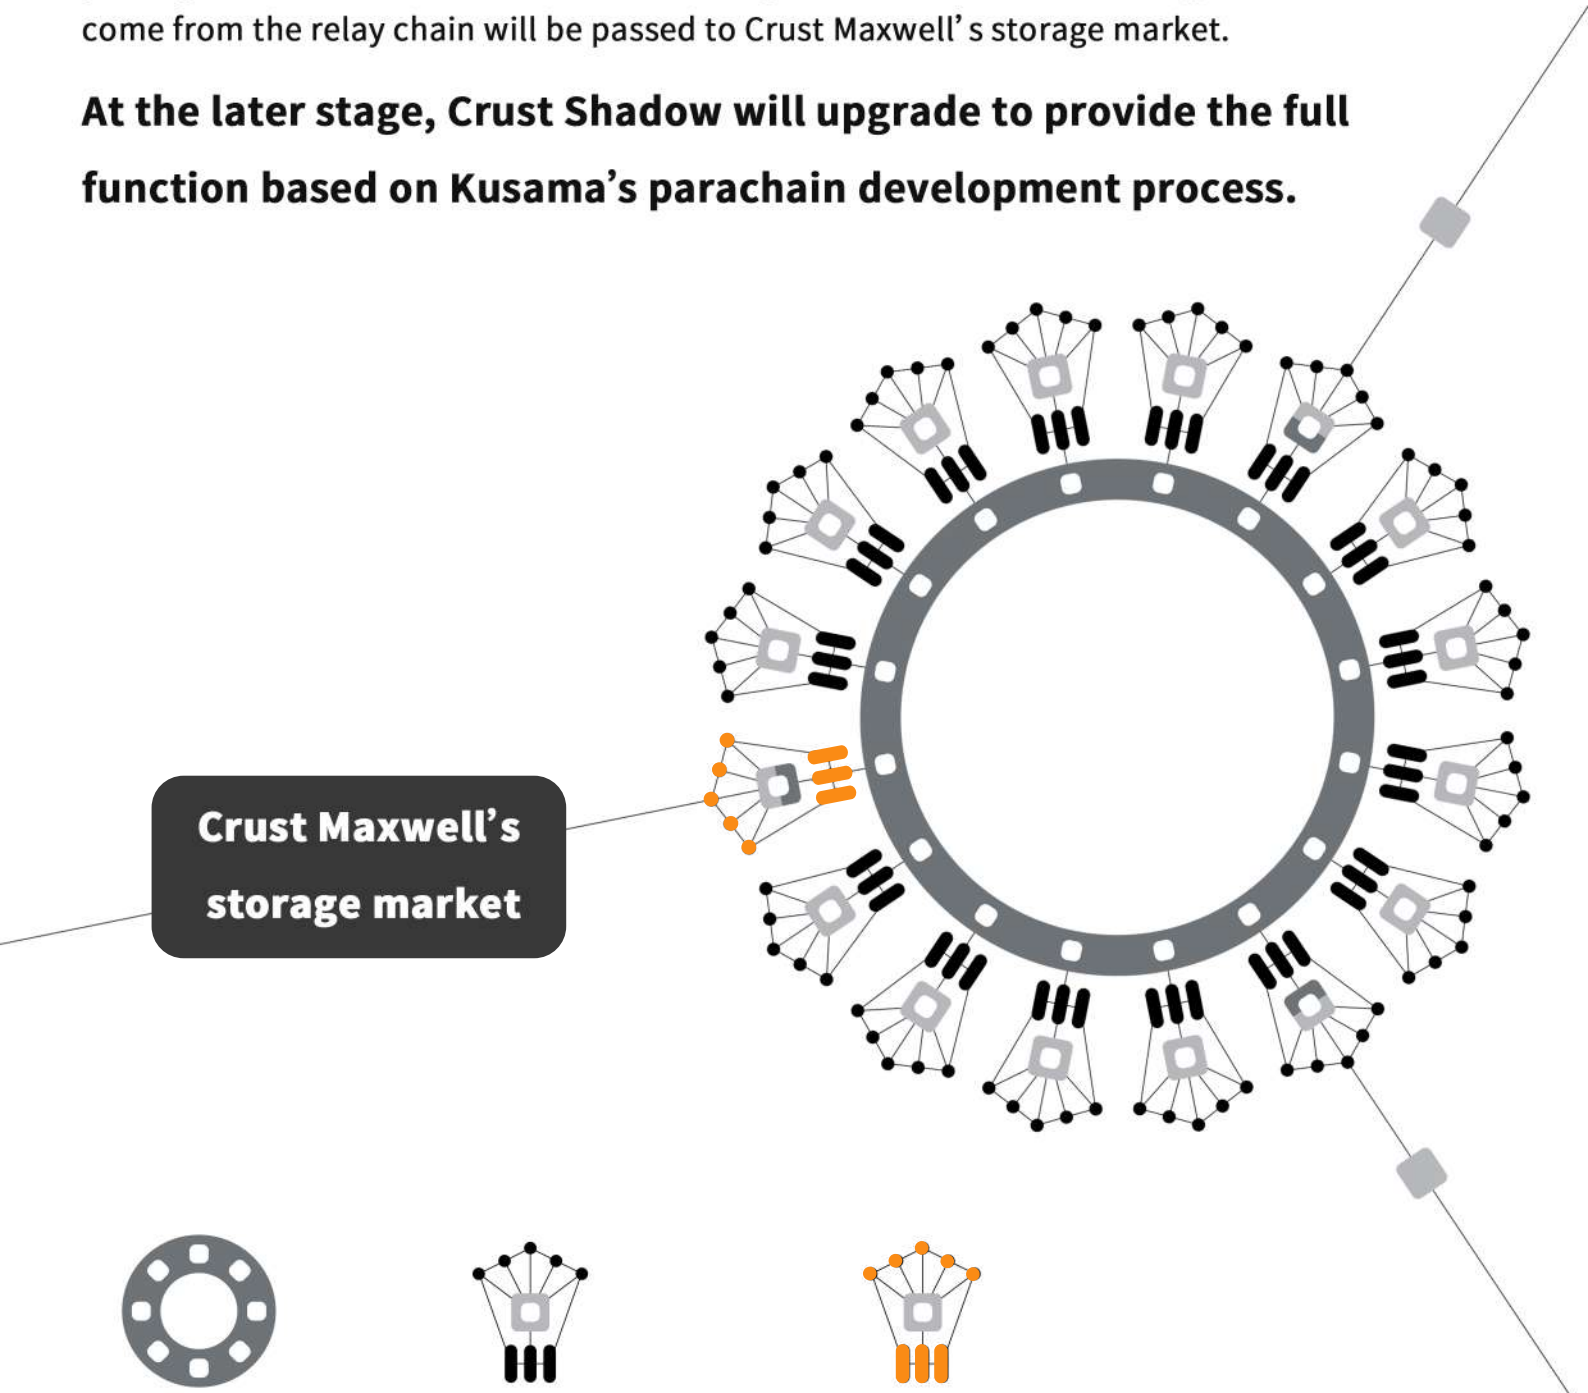

Crust Shadow is designed to be a Kusama parachain. It will participate the Kusama's slot auction.

Crust Shadow is a proving ground for XCMP, can provide storage function to other parachains. it will upgrade following the Kusama's development.

What can you do on Crust Shadow ?

At the early stage, Crust Shadow starts with a PoA consensus, in order to be Kusama parachain compatible. you can develop cross-chain message model or use cross-chain message passing service on it. Crust Shadow is a storage functional network, storage orders that come from the relay chain will be passed to Crust Maxwell's storage market.

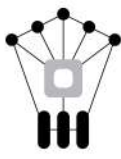

At the later stage, Crust Shadow will upgrade to provide the full function based on Kusama's parachain development process.

CSM TOKEN

CSM token is Crust Shadow's original token. The total initial amount of CSM is 200 million, it will be allocated to community. CSM can be used in the following aspects:

Staking to maintain the coming GPoS consensus of the Crust Shadow.

Used to guarantee the Crust Shadow nodes.

Serving as guarantee deposit for providing recourse service.

Serving as a transaction fee for using the Crust Shadow.

Used to purchase resource services.

Used to participate in Maxwell's storage market related activities.

Used for election and voting of on-chain governance mechanism, and vote on proposals.

Users can use it to obtain discounts related to Maxwell's or Crust Shadow's storage market rates.

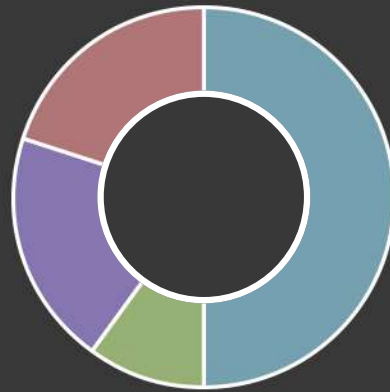

Used for privacy encryption of data, exchange and trading of data assets, and censorship governance of data content.

Can be used to exchange CRU in Maxwell's market revenue pool in the further.

Crust Shadow
is owned by those
who hold the
CSM tokens.

CSM token allocation:

- 50% allocate to CRU liquidity pool
- 20% allocate to Kusama parachain auction
- 10% community airdrop
- 20% reserve for promotion
