Project Tech Paper

The defi space has brought us countless opportunities for previously unimaginable profits and changed many lives, but it has also brought with it plenty of scams and rip-offs.

Being an investor in an emerging market, an unregulated and decentralized one at that, is extremely risky and you can easily lose all your money. This is where smart tools and communities of investors have come together to help each other and make investing safer.

These tools include voting platforms, new token trackers, contract trackers, etc. The main problem with all of these tools is that much of the data is manipulated and doesn't give us a clear picture. This is where we come in. HunterDoge is here with an ecosystem of tools to help you make your investment decisions while ensuring that the information is free from manipulation.

By building the platform and growing our community, we hope to realize our vision to make the defi space safer and get to the moon together.

Intro

A year ago, we started thinking about how we could make the DYOR aspect of projects extremely efficient and reliable to solve the problems mentioned above. Our solution was simple: we decided to build a platform where information could not be manipulated and investors could easily make decisions about whether and when to invest.

We also wanted to ensure that our investors were rewarded and that the token included a revenue generation model. Combining our use

cases with shared revenue coming into play through our buy-back-and-burn protocol seemed like the perfect recipe.

We've laid out our plans for HunterDoge below, and plan to effectively reach each stage while building a strong base of investors.

Smart Contract

To make the user experience as simple as possible, our smart contract is pretty straightforward. We charge a 5% fee on every transaction that takes place outside of our ecosystem. This fee is stored in our smart contract and sold periodically when a certain amount is reached. The tokens are exchanged for USDT or BUSD, which are sent to our holders as rewards.

By constantly and regularly exchanging fees for rewards, we ensure a healthy growth of our market capitalization. People can hold their tokens and use them in our ecosystem without worrying about missing out on some profits.

HunterDoge's Tech Paper

HunterDoge NFTs

NFTs are a familiar thing in the environment we work in. NFTs are different from regular ERC20 tokens that fuel our environment. The NFT ID is unique, so each token exists only once. This makes the tokens „non-fungible.“

We will use NFTs for different aspects in our ecosystem. The first approach for us will be to integrate a so-called „bullet“. The main goal of this „bullet“ will be to ensure that we all decide on the same contract that we are exploring. For every contract on the blockchain, there are forgeries and frauds. For our research platform, we want to make sure that people are all talking about the same contract/project. To ensure this, we will use the „bullets“ and send these NFTs to the right contract, which in this case will verify the target for us.

Another approach is to offer „art“. Since we have very passionate artists in our team, we want to spread the „HunterDoge“ as much as possible. To ensure this, we will offer special HunterDoge NFTs. These NFTs will be offered to the public to trade and give away. In this way, the image of our Doge will be everywhere in the crypto space.

HunterDoge Voting

The currently active voting platforms all have one thing in common: they are full of manipulated information. None of the current platforms offer a responsible way for a project to gain attention with real votes. Projects with less than 1000 owners have more than 100,000 votes in one day, which is a bit strange and makes the information very insecure for the user.

Our main goal is to make sure that our platform has a responsible way to provide information to users, we will make sure with our smart contracts that the votes are real, we will have different features that will block bots and other abusers from our platform.

In addition to these new features, we will also offer revenue sharing for our community, because we believe that our platform is worth nothing without a real community behind it. To ensure this, 50% of our revenue generated through promo-

tions and offers on our platform will be shared through buy-backs and burns on our platform.

Buy-back-and-Burn Model

The buy-back-and-burn model is the most proven model for a constantly growing ecosystem, as HunterDoge will be. By daily/weekly burns of the own native token we will ensure a deflationary development of the supply.

Further Development

Further development will focus on integrating multiple chains into our community. We will soon set up our HunterNFT system on multiple chains to be able to address projects that take place on different chains. The focus of our platform is on a stable and healthy growing community.
