

New allergy prescription needed to replace the current "Dymista 137/50 MCG Nasal SPR 120SPR". My insurance no longer covers this combination medication.

However, it is extremely effective and is really the main medication that is controlling my allergies. So, I'd like something similar/the same medication basically.

If possible, I would like a prescription for the following (Which are the component drugs of Dymista.):

azelastine hydrochloride

and

fluticasone propionate
